STORGARD DOME TRAP HOLDER

SECURE TRAP PLACEMENT - FLEXIBLE RELOCATION

For use with the Standard DOME™ or QUICK-CHANGE™ DOME™ TRAP

The **DOME™ Trap HOLDER** features four small holes to anchor the **HOLDER** to the floor using screws, glue, double-sided tape or adhesive-back velcro. The design of the **HOLDER** allows the air to flow around and inside the trap for proper release of pheromones and kairomones into the surrounding environment. The top **Bow** holds the trap in place with a snap closure that can be easily opened and closed for trap counting and maintenance.

1. Remove components from carton. Each carton includes:
A. Base (10) **B.** Adhesive-back Velcro (20) **C.** Bow (10)
2. Secure the Base by one of the following: screws no greater than .20" (1/5") in diameter, a suitable adhesive system (i.e. Adhesive-back Velcro), or silicone. Be careful not to alter the shape of the support. Place the **DOME Trap** within Base in desired location
3. Secure the Bow onto the Base with a slight pressure on the lever located at the ends and push until it clicks. Repeat the operation on the other end of the Bow. The **DOME Trap** is now secured in its position
4. To access the trap, press the tab on one end of the Bow to open the snap closure
5. Lift one end of the retainer Bow to allow access to the **DOME Trap**
6. Remove the **DOME Trap** from the **HOLDER**
7. For the **QUICK-CHANGE DOME Trap**, remove the lure tray from the **DOME Base** to service. For the **Standard DOME Trap**, remove the top of the **DOME Trap** for servicing
8. After servicing, place the **DOME Trap** into the **HOLDER**
9. Secure the Bow onto the Base of the **DOME Trap HOLDER**
